AMENDMENTS TO THE CLAIMS

Without prejudice, please amend the claims as reflected in the following listing of claims, which will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1.   (Currently Amended) A method of building a presentation, the method comprising:

a)   accessing multimedia content from a multimedia source through a multimedia content application;

~~a~~b)   receiving user input ~~identifying~~ while said multimedia content application is running, to activate a concurrent presentation window and automatically cause said multimedia content accessed by said multimedia content application to appear in a preview window of said presentation window to identify multimedia content to be included in said presentation; and

~~b~~c)   copying said multimedia content ~~identified by said user input~~displayed in said preview window from a~~said multimedia source to memory, for access by a presentation application.

2.   (Original) The method claimed in claim 1 wherein copying comprises copying said multimedia content from an application while said application is using said multimedia content.

3.   (Original) The method claimed in claim 1 further comprising associating an identifier with said multimedia content, for access by the presentation application.

4.   (Original)   The method claimed in claim **3** wherein associating an identifier comprises associating a uniform resource locator with said multimedia content.

5.   (Original)   The method claimed in claim **4** wherein associating an identifier comprises associating with said multimedia content a uniform resource locator identified by an application using said multimedia content.

6.   (Original). The method claimed in claim **1** further comprising associating user-definable notes with said multimedia content, for use by the presentation application.

7.   (Original) The method claimed in claim **1** further comprising producing a multimedia content record accessible by the presentation application, said multimedia content record including a link to said multimedia content in said memory.

8.   (Original) The method claimed in claim **7** further comprising producing said multimedia content record such that it includes an identifier associated with said multimedia content.

9.   (Cancelled)   ~~The method claimed in claim 1 further comprising executing the steps recited in claim 1 while concurrently running a multimedia content application.~~

10.   (Cancelled) ~~The method claimed in claim 9 further comprising using said multimedia content application to access multimedia content selectable by a user for copying as recited in claim 1.~~

11.   (Cancelled) ~~A method of providing a presentation comprising:~~

~~a)   identifying multimedia content previously identified by a user as to be included in said presentation; and~~

~~b)   accessing and presenting at least some of said multimedia content previously identified by the user.~~

12.   (Cancelled) ~~The method claimed in claim 11 wherein presenting comprises directing a viewing application to said multimedia contact previously identified by the user.~~

13.   (Cancelled) ~~The method claimed in claim 12 further comprising automatically directing said viewing application to said multimedia content previously identified by the user.~~

14.   (Currently Amended)   A computer-readable medium for providing processor-readable instructions for directing a processor circuit to:

   a)   access multimedia content from a multimedia source through a multimedia content application;

   ~~a~~b)   receive user input ~~identifying~~while said multimedia content application is running, to activate a concurrent presentation window and automatically cause said multimedia content accessed by said multimedia content application to appear in a preview window of said presentation window to identify multimedia content to be included in said presentation; and

   ~~b~~c)   copy said multimedia content ~~identified by said user input~~displayed in said preview window from ~~a~~said multimedia source to memory, for access by a presentation application.

15.   (Currently Amended) A signal ~~embodied in a carrier wave~~readable by a computer, said signal comprising:

   a)   a first code segment for directing a processor circuit to access multimedia content from a multimedia source through a multimedia content application;

ab)   a ~~first~~second code segment for directing a processor circuit to receive user input ~~identifying~~while said multimedia content application is running, to activate a concurrent presentation window and automatically cause said multimedia content accessed by said multimedia content application to appear in a preview window of said presentation window to identify multimedia content to be included in said presentation; and

bc)   a ~~second~~third code segment for directing a processor circuit to copy said multimedia content ~~identified by said user input~~displayed in said preview window from a~~said multimedia source to memory, for access by a presentation application.

16.   (Currently Amended) An apparatus for building a presentation, the apparatus comprising:

a)   means for accessing multimedia content from a multimedia source through a multimedia content application;

ab)   means for receiving user input ~~identifying~~while said multimedia content application is running, to activate a concurrent presentation window and automatically cause said multimedia content accessed by said multimedia content application to appear in a preview window of said presentation window to identify multimedia content to be included in said presentation; and

bc)   means for copying said multimedia content ~~identified by said user input~~displayed in said preview window from a~~said multimedia source to memory, for access by a presentation application.
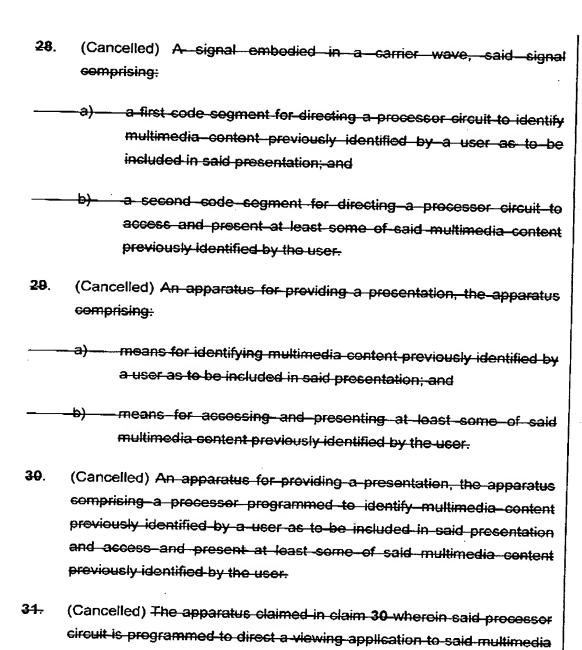

17. (Currently Amended) An apparatus for building a presentation, the apparatus comprising:

a) a receiver operable to access multimedia content from a multimedia source through a multimedia content application;

~~a~~b) a receiver operable to receive user input ~~identifying~~while said multimedia content application is running, to activate a concurrent presentation window and automatically cause said multimedia content accessed by said multimedia content application to appear in a preview window of said presentation window to identify multimedia content to be included in said presentation; and

~~b~~c) a copying device for copying said multimedia content ~~identified by said user input~~displayed in said preview window from ~~a~~said multimedia source to memory, for access by a presentation application.

18. (Original) The apparatus claimed in claim 17 wherein said copying device comprises a processor circuit programmed to copy said multimedia content from an application running on said processor circuit while said application is using said multimedia content.

19. (Original) The apparatus claimed in claim 17 further comprising a processor circuit programmed to associate an identifier with said multimedia content, for access by the presentation application.

20. (Original) The apparatus claimed in claim 19 wherein said processor circuit is programmed to associate a uniform resource locator with said multimedia content.

21. (Original) The apparatus claimed in claim 20 wherein said processor circuit is programmed to associate with said multimedia content a

A12

uniform resource locator identified by an application using said multimedia content and running on said processor circuit.

22.   (Original)   The apparatus claimed in claim **17** further comprising a processor circuit programmed to associate user-definable notes with said multimedia content, for use by the presentation application.

23.   (Original)   The apparatus claimed in claim **17** further comprising a processor circuit programmed to produce a multimedia content record accessible by the presentation application, said multimedia content record including a link to said multimedia content in said memory.

24.   (Original)   The apparatus claimed in claim **23** wherein said processor circuit is programmed to produce said multimedia content record such that it includes an identifier associated with said multimedia content.

25.   (Currently Amended)   The apparatus claimed in claim **17** wherein said <u>means for accessing, said</u> receiver and said copying device are provided by a processor circuit programmed to ~~concurrently~~ run a<u>said</u> multimedia content application.

26.   (Original)   The apparatus claimed in claim **25** wherein said processor circuit is programmed to use said multimedia content application to access multimedia content selectable by a user.

27.   (Cancelled)   ~~A computer-readable medium for providing processor-readable instructions for directing a processor circuit to:~~

~~a)   identify multimedia content previously identified by a user as to be included in said presentation; and~~

~~b)   access and present at least some of said multimedia content previously identified by the user.~~

28.   (Cancelled) ~~A signal embodied in a carrier wave, said signal comprising:~~

~~a)   a first code segment for directing a processor circuit to identify multimedia content previously identified by a user as to be included in said presentation; and~~

~~b)   a second code segment for directing a processor circuit to access and present at least some of said multimedia content previously identified by the user.~~

29.   (Cancelled) ~~An apparatus for providing a presentation, the apparatus comprising:~~

~~a)   means for identifying multimedia content previously identified by a user as to be included in said presentation; and~~

~~b)   means for accessing and presenting at least some of said multimedia content previously identified by the user.~~

30.   (Cancelled) ~~An apparatus for providing a presentation, the apparatus comprising a processor programmed to identify multimedia content previously identified by a user as to be included in said presentation and access and present at least some of said multimedia content previously identified by the user.~~

31.   (Cancelled) ~~The apparatus claimed in claim 30 wherein said processor circuit is programmed to direct a viewing application to said multimedia contact previously identified by the user.~~

32.   (Cancelled) ~~The apparatus claimed in claim 31 wherein said processor circuit is programmed to automatically direct said viewing application to said multimedia content previously identified by the user.~~

33.   (New) <u>The method claimed in claim **1** further comprising displaying previously copied multimedia content in respective preview windows in said presentation window.</u>

34.   (New) <u>The method claimed in claim **3** further comprising displaying said identifier in association with said preview window.</u>

35.   (New) <u>The apparatus claimed in claim **1** further comprising means for displaying previously copied multimedia content in respective preview windows in said presentation window.</u>

36.   (New) <u>The apparatus claimed in claim **3** further comprising means for displaying said identifier in association with said preview window.</u>
